

## Lab 3

1. Display the date of exam as the following: *day 'month name' year*.
2. Create function which takes subject id and return the number of students who failed in a subject. (score less than 50)
3. Create Table called Deleted\_Students which will hold the deleted students' info (same columns as in student tables).
4. Create trigger to save the deleted student from Student table to Deleted\_Students.
5. Create trigger to save the newly added students to Student table to Backup\_Students.
6. Create trigger to keep track the changes of contact info table (add/update rows). It will log the time of action and description of action to another table.
